

ACKNOWLEDGEMENTS

The day I finished this thesis, Mekong Rapids Blasting activities in Chiang Khong, Chiang Rai Province is on hold. The new EIA is completed and indicated minor impacts from this project to livelihood, tourism and environment. However, I hope that this research creates a baseline for further study on Mekong and media in the future.

People have said that it's not easy to get a thesis done. But it can be easy if one really spends time and pay serious attention on it. Even if it takes me a long time to get this done, I am doing it with full happiness.

I would like to give my heartfelt thanks to many people who inspired and encouraged me to this achievement; a wide opened heart Assoc. Prof. Dr. Kamolrat Intaratat, thesis committee, Asst. Prof. Dr. Porntip Yenjabok, Dr. Saranthorn Sasithanakornkaew represented Graduate school and Dr. Robert Mather from WWF Greater Mekong Programme, a committee member and my wonderful boss. And few more persons behind the scene, my mentor Giulio Quaggiotto, and Liam Salter former WWF Asia Pacific Climate Change Coordinator who provided me partial grant to take this course. I would like to thank my respondents and Chiang Khong Conservation Group who inspire and show me their admirable spirit to save the Mekong and their livelihood. Thanks to Tuenjai Mitmana, my lovely classmate who is never get tired of calling and pushing me to get the thesis done.

Most of all, I would like to thank Andrew Scarvell, my editor who is willing to make available his busy schedule to edit my thesis. He is not only guiding me with proper English writing but also providing me mentally support when I am down.

I would like to dedicate this study to my beloved family, especially my father and mother who are always supporting me everyway they can.
