Year : 2001

The study of the effectiveness in work of Lum Dome Noi Land Settlement, Ubol Ratchathani Province, was carried out with the followed objectives ;

1. To evaluate the effectiveness in work of Lum Dome Noi Land Settlement, Ubol Ratchathani Province according to problem-solving for displaced people from building Sirindhorn Dam,
2. To clarify problem and obstacle in running Lum Dome Noi Land Settlement.
3. To have information for guideline to solve existed problems and to run Lum Dome Noi Land Settlement properly in the future.

Questionnaires were distributed among population of 87 families who were resettled form the flooded area of Sirindhorn Dam to a resettlement farmland project, Lum Dome Noi Land Settlement in Ubol Ratchathani province , during phase 1 of helping scheme. The study adopted descriptive statistics analysis using percentage and mean.

The results indicated that :

1. Evaluation of the effectiveness of setting up and running Lum Dome Noi Land Settlement was as follows.

1.1 Response to the problem and the need of farmland for agricultural purpose : Most of population expressed their satisfaction at high level with the given of 15 Rais of farmland. In addition, all of them used the land for agricultural purposes, while the most of population lived on the given lands.

1.2 Response to problem and the need of public utility : Most of the population thought that existed public utility were sufficient at moderate level, while their efficiencies were at moderate level. The population has also expressed the sufficient of occupation supporting activities have at high level, but such activities have the role of increasing income at low level, those occupation supporting activities have the role of supporting the need within families at high level. Additionally, all of population have received social security service with the satisfaction at high level.

1.3 Sufficiency and effectiveness of running the settlement : The population expressed that the structural management in running the settlement was at high level, while the administration was also at high level.

1.4 Possibility to terminate the problem of over-requesting in phase 1 from study group : 97.7 percentages of population expressed the unwilling for joining the protestation, requesting the government for more help and facility, with the same problems.

2. From this study, some problems were clarified as the road system and water supply were not sufficient. There is also no irrigation system in the area which is a significant obstacle for agricultural activities. The suggestion was the administration section of settlement should urgently report and request for such utilities to all related governmental organizations.
