

ACKNOWLEDGMENTS

I would like to express my sincere thanks to my advisor, Assistant Professor. Dr. Somsook Khongpun, Head of the Master's Program in English for Careers, Thammasat University, for her kindness in giving the valuable advice and guidance in this research. I am most grateful for her constant encouragement throughout this study. I would not have achieved this much without all the support that I have often received from her.

In addition, I am grateful for my staff in the microbiological laboratory of water and beverages, Bureau of Quality and Safety of Food, Department of Medical Sciences, for their help in collecting and analyzing the drinking water samples.

Finally, I most gratefully acknowledge my organization, The Department of Medical Sciences, Ministry of Public Health, for supporting the analysis of drinking water samples throughout the period of this research.
