

ACKNOWLEDGEMENTS

First, I thank my advisor Asst. Prof. Dr. Monnipha Sompong, for her continuous support. She is responsible for involving me in this research and is always there to listen to me and give advice.

A special thanks goes to my co-advisor, Assoc. Prof. Kitima Surasonti. She is responsible for helping me complete the writing of this thesis. She gave me confidence, supported my research and came up with good ideas. She was always willing to meet and talk about my ideas to help me think through my problems. Without her encouragement and guidance, I could not have finished this study.

Besides my advisor and co-advisor, I would like to thank the rest of my thesis committee: Asst. Prof. Dr. Somsook Khongpun and Asst. Prof. Dr. Sawitri Pechapan who gave insightful comments and reviewed my work. I also thank Asst. Prof. Aree Sa-ardavut, who gave me useful advice on the statistical analysis, as well as the staff at LITU for all their help.

Let me also say ‘thank you’ to all of my friends and my colleagues who dedicated their precious time to giving me so much help and enthusiasm. They were always ready to listen to my complaints and frustrations.

As always, thanks to my family for everything.
