

List of Figures

Figure	Page
2.1 (a) Optic Disk Image (b) Optic Disk with the condition ROP	5
2.2 (a) Demarcation line (b) Ridge of the demarcation line (c) Ridge with extra-retinal fibrovascular proliferation	6
2.3 Guideline diagram used in the classification of retinopathy of prematurity	7
2.4 The example of optic disk data set	8
3.1 The Hough Transform used for straight line detection	10
3.2 The Hough Transform-polar representation	10
3.3 a) Binary dataset consisting two circles of radii 10 and 30 units b) result of using circular Hough Transform to find circles of radius 30 units c) result of using circular Hough transform to find circles of radius 10 units	11
3.4 (a) A part of an resulting image after applying 2D circular Hough transform (b) Result of matching the circle to the high probability point with 20-pixel radius (c) First few approximation of circle.	12
3.5 (a) Using a mask shape of donut (b) The best detected circle	12
3.6 (a) OD automatically detected by our system (b) Clinician's hand-drawn ground truth (c) Detected pixels	14
3.7 Showing a flowchart of 2D Circular Hough Transform process	14
3.8 Showing the accuracy result of 2D Circular Hough Transform technique	14
4.1 Dimensionality Reduction	16
4.2 The training images of optic disk	20
4.3 The training set of OD image and their average vector	20
4.4 The examples of eigen disk	21
4.5 Examples of image reconstruction using eigen disk	22
4.6 The detection results of four example OD images	22
4.7 Showing a flowchart of PCA	23
4.8 (a) The first Snake is placed near OD (b) The edge map $ G(x, y) * I(x, y) ^2$ with sigma = 2.5 (c) GVF field image (d), (e), (f) An example of GVF Snake in action where (d) Initial position of Snake and location of the model after 40 (e) 80 and (f) 200 iterations (g), (h) Detected OD is mapped to the original fundus image	24
4.9 Showing a flowchart of GVF Snake	25
4.10 Examples of successful results	25
4.11 (a) OD automatically detected by our system (b) Detected pixels (c) Clinician's hand-drawn ground truth	26

4.12	(a) ground truth image (b) Detected pixels (c) definition of segmentation evaluation	26
4.13	The accuracy result for all images	28
5.1	Erosion and dilation (a) the original image (black = object) (b) the 3x3 structuring element (c) the erosion of (a) (d) the dilation of (a)	31
5.2	Sequential applications of erosion and dilation (a) original image set (b) opened version (c) closed version	31
5.3	(a) The Optic disk in Red Channel (b) Histogram Enhancement (c) Averaging filter for smoothing the image (d) Closing Image for removing blood vessel	32
5.4	(a) Canny Edge detection (b) Edge thickener result	33
5.5	(a) After dilation (b) Fill the hole (c) after image erosion	34
5.6	(a) Input image to step 10 (b) After noise removal	35
5.7	The examples of successful result	35
5.8	Showing the diagram of methodology	35
5.9	(a) Clinician's hand-drawn ground truth (b) Detected pixels from mathematical morphology	36
5.10	(a) The sensitivity and specificity result in retinal image with ROP condition (b) The sensitivity and specificity result in retinal images with diabetic retinopathy	38
