

ACKNOWLEDGEMENTS

This thesis would not be possible without the contribution of many people, who have given me support. It is truly my honor to express a deep appreciation to them on this occasion.

First, I am indebted to my advisor, the chairman of my thesis, Assoc. Prof. Dr. Thamavit Terdudomtham. His invaluable advice, comments, and encouragement influenced me to be able to complete this thesis. He has consistently offered his availability to meet and discuss details. In addition, I am indebted to Assist. Prof. Dr. Kriengkrai Techakanont who has always given his time generously to discuss the thesis and recommended related literature, which precisely offers methodologies and theories. In addition, I would like to express my gratitude to Dr. Peera Charoenporn, another thesis committee member, for giving me many comments and suggestions, specifically sharing with me his experience in carrying out surveys. Furthermore, I would like to thank Assist. Prof. Dr. Archanun Kohpaiboon for his comments in Research Methods (EE 695).

For allowing me to derive in-depth information from interviews, I would like to thank Toyota Motor Asia Pacific Engineering and Manufacturing (TMAP-EM). It is a leading organization, which emphasizes the importance of research and development (R&D) and fully facilitated me in my study.

In appreciation to others, I would like to thank Mr. Prasert Vijitnoparat, Mr. Paritat Chantasakda, and my M.A. colleagues, who always gave me assistance and encouragement.

Along with the above people, I am very grateful to Thammasat University for its scholarship awards.

Finally and foremost, this thesis would not be possible without my family's support and understanding. I also would like to express my deepest gratitude to my grandmother for her love and support.
