Independent Study Title   Development of an Account Payable System of Siam Mandalay
Company Limited

Author   Ms. Rungrat Panmen

Degree   Master of Science (Information Technology and Management)

Independent Study Advisor   Associate Professor Prateep Chankong

ABSTRACT

The research on "Development of an Account Payable System of Siam Mandalay Company Limited" aims to improve legacy account payable system of the organization in which prefer a better performance in management and support the company itself for the future growth of the business. The capability of the developed software covers ability in administrating - managing account payable system and the ability in establishing a financial plan strategy. The users are able to search and check the documentation in a fast manner. Moreover, the data is accurate and the processes are designed to reduce all redundancy and overlapped methods.

The researcher uses a secondary data collecting method. The scope of the study is to develop a new application, in which the research is based on oracle client/server architecture. Additionally, the developer2000 is utilized applied as a tool.

The development and test of the account payable system follows a path mentioned below. First, the research starts over by studying and analyzing the current system in the organization. Second, the gathered information from the first state will be used in a continuous design flow along with database that suits user/customer satisfaction. This new developed system has been proved that, after it the installation under the real working conditions, it works efficiently and meets all requirements including coping former problems of the former system, adding new functions (searching, updating and deleting data into database) and issuing fully/partly reports classified by user demands. Furthermore, the system is able to transfer data from major accounting forms to a general ledger system.
