Division	Computer and Information Technology
Academic Year	1998

### Abstract

This research has objective to analyze and design a Personel database management System at Inside Plant Sector 4 of The Organization Telephone of Thailand. The System Development Life Cycle Theory was selected as a mode in this study. The researcher had studied, analyzed document and interviewed the staff of Inside Plant Sector 4 about the current system and then designed the proposed system. These application programs were developed by using Microsoft Access 97.

The designed system was evaluated by two groups of user, practitioners and administrators. In one month after system implementation, the users showed that they were satisfied the accuracy, completeness, relevancy and the convenience of the database and the information system.
