

Thesis Title	The Development of Information System for Planning and Management of Computer Equipment and Its Extension in the Wire and Wireles Company Limited
Thesis Credits	6
Candidate	Mr. Attasit Wongwattana
Supervisors	Associate Professor Pairoaj Tiranathanagul Mrs. Uthara Tanuraikul
Degree of Study	Master of Science in Industrial Education
Division	Computer and Information Technology
Academic Year	1999

#### Abstract

The objective of this research was to develop the information system for planning and management of computer equipment and its extension in the Wire and Wireles Company Limited. The researcher has developed the information system by selection the System Development Life Circle Theory as a mode of the study. He intentionally studied and analyzed the current system and then designed the proposed system. These application programs were developed by using Microsoft Access 97 (Thai Version).

The evaluation of the user's satisfaction on the proposed system found that they were satisfied in all respects. They satisfied with data input and output as well as with the process of the working system.

Keywords : System Analysis and Design / Information System / Planning and Management of Computer Equipment and Its Extension.
