This project is a database information system and is designed for the registration system by using World Wide Web technology on Intranet and managing database on the Database Management System. The student can register himself or herself through the system. Administrator can manage registration data and lecturer can approve the student registration. Otherwise, the user can search the subject, timetable, grade, and information of student and lecturer quickly and correctly that make economize to resources and time and the Registration System can be developed and implemented with the other system in the future.
