

LIST OF FIGURES

Figures		Page
1	Sildenafil (Viagra [®]), a PDE5 inhibitor.....	2
2	Flavone skeleton.....	3
3	Phenanthrene skeleton.....	3
4	Papaverine.....	4
5	The hydrolysis reaction of cGMP by PDE5.....	6
6	The three major types of mammalian PDEs classified according to their substrate selectivities.....	7
7	Similarities and differences between PDE5 and PDE6.....	10
8	PDE5 inhibitors.....	11
9	Factors that cause erectile dysfunction.....	12
10	The mechanism of PDE5 inhibitors in corpus cavernosum.....	13
11	Natural substances against PDE5.....	14
12	Flowers and pseudo-bulbs of <i>E. macrobulbon</i>	18
13	9,10 dihydrophenanthrene compounds in <i>Eulophia</i> spp.....	19
14	9,10 dehydrophenanthrene compounds in <i>Eulophia</i> spp.....	20
15	The 7-methoxyflavone constituents from rhizomes of <i>K. parviflora</i>	28
16	Solvent-solvent partition procedure of <i>E. macrobulbon</i> extract.....	30
17	Isolation procedure of PDE5 inhibitors from <i>E. macrobulbon</i>	32
18	Synthetic pathway for amide, DHIQ and THIQ derivatives.....	35
19	Principle of radioactive PDE assay.....	39
20	Vasodilator effect protocol.....	43
21	PDE5 inhibitory activity of crude EtOH extract of <i>E. macrobulbon</i> and its partition extracts at a final concentration of 50 µg/ml (n=3).....	52
22	Structures of phenanthrenes isolated from <i>E. macrobulbon</i> extract.....	53

LIST OF FIGURES (CONT.)

Figures		Page
23	Diagnostic HMBC (a) and NOESY (b) correlations of 9,10-dihydro-2,5-dimethoxyphenanthrene-1,7-diol (9).....	54
24	Diagnostic HMBC (a) and NOESY(b) correlations of 9,10-dihydro-4-(4'-hydroxybenzyl)-2,5-dimethoxyphenanthrene-1,7-diol (10).....	58
25	Diagnostic HMBC (a) and NOESY(b) correlations of 1-(4'-hydroxybenzyl)-4,8-dimethoxyphenanthrene-2,7-diol (11).....	62
26	Diagnostic HMBC (a) and NOESY(b) correlations of 1,5,7-trimethoxyphenanthrene-2,6-diol (12) (in methanol- <i>d</i> ₄).....	68
27	A typical trace of vasorelaxant effect of <i>E. macrobulbon</i> extract (1-200 ug/ml) (a), a typical trace of vasorelaxant effect of DMSO (0.2% v/v in bath) (b), Log concentration – relaxation curve of <i>E. macrobulbon</i> extract (c).....	72
