

## **ACKNOWLEDGEMENTS**

I would like to express my deepest and sincere gratitude to my advisor, Associate Professor Dr. Chainarong Navanukraw for his kindness in providing an opportunity to be his advisee. He has given me his time, knowledge, constant guidance, and a lot of suggestions throughout/during my study. I am also appreciated for his valuable supervision, encouragement, supporting, guidance and criticism served as mentor throughout the course of my study.

I would like to thank National Center for Genetic Engineering and Biotechnology, Thailand (BIOTEC) and technicians for their collaboration as well as Department of Animal Science, Faculty of Agriculture, Khon Kaen University.

I would like to sincerely thank for graduate and undergraduate students under Associate Professor Dr. Chainarong Navanukraw for their help and good time.

My special thanks go to the full financial support from the Office of the National Research University (NRU), Khon Kaen University, Thailand Research Fund (TRF), and the National Research Council of Thailand (NRCT).

Finally, I would like to express my sincere gratitude and appreciation to my dear parents and my sister who gave me a chance to study and have strongly supported me. I would like to give special thanks to all those people whose names disappeared here-in who helped me to complete this thesis.
