

ACKNOWLEDGEMENTS

This study consumed huge amount of work and time. Still, implementation would not have been possible if I did not have a support of many individuals and organizations. Therefore I would like to extend my sincere gratitude to all of them.

Initially, the success of this thesis can be succeeded by the attentive supports and assistances from my major advisor, Assistant Professor Jarugool Tretriluxana. I would like to express my sincere gratitude and deepest admiration to her for her excellent guidance, invaluable suggestions, supervision, proofreading, editing and all of the support throughout the development of my thesis.

Aforementioned gratefulness also widely extends to Assistant Professor Pakaratee Chaiyawat and Doctor Apichart Pisarnpong, my co-advisors. Her and his guidance about research, ethical issue, recruitment process and research presentations are excellent. They always gives me beneficial information and suggestions.

My equal gratefulness also relevantly reaches to my family for their countless mental supports and also extends to the staffs in Parkinson's disease clinic at Siriraj Hospital for their kindness and support to recruit participants.

Special thanks are delivered to Faculty of Physical Therapy, Mahidol University for partial support of the tuition fee and the research fee. This is a part of my financial support. In addition, I am also grateful to National Research Council of Thailand for provision of research funding support.

Finally, I would like to thank the entire respondents who were the sampling in this study. They gave me good cooperation and nice assistances. Additionally, I would like to express the impressive appreciation to Nattaporn Intawachirarat for helping me in analyses by MATLAB program, my friends and all persons who helping me in various ways.
