ABSTRACT (ENGLISH)	iv
ABSTRACT (THAI)	v
LIST OF TABLES	x
LIST OF FIGURES	xiii
LIST OF ABBREVIATIONS	xvi
CHAPTER I INTRODUCTION	1
1.1 Purposes of the study	5
1.2 Parameters of the study	6
1.3 Scope of the study	7
1.4 Hypotheses of the study	7
1.5 Advantages of the study	8
1.6 Conceptual framework	9
CHAPTER II LITERATURE REVIEW	10
2.1 Parkinson’s disease (PD)	10
2.2 Motor control of reach-to-grasp (RTG) movement	16
2.3 Reach-to-grasp kinematic measurements	21
2.4 Training for upper extremity dysfunction in PD	23
2.5 Mirror neurons	24
2.6 Motor learning	32
CHAPTER III MATERIALS AND METHODS	37
3.1 Study design	37
3.2 Research participants and recruitments	37
3.3 Sample size	39
3.4 Group allocation	40

CONTENTS (cont.)

	Page
3.5 Instruments	40
3.6 Experimental procedures and tasks	41
3.7 Experimental setup	43
3.8 Training groups	44
3.9 Movement recording and data processing	45
3.10 Dependent variables and data analysis	45
3.11 Flowchart of procedure of the study	48
CHAPTER IV RESULTS	50
4.1 Characteristics of participants	50
4.1.1 First experiment	51
4.1.2 Second experiment	52
4.2 First experiment: effects of Parkinson's disease on reach-to-grasp actions.	53
4.2.1 Reaction time (RT) measure	53
4.2.2 Kinematics measures	54
4.2.3 Transport-grasp coordination measure	56
4.3 Second experiment	58
4.3.1 Effects of AO on motor learning of trained-task	58
4.3.2 Effects of AO on motor learning of untrained-task	64
4.3.3 Underlying mechanisms of AO on motor learning of RTG actions	80

CONTENTS (cont.)

	Page
CHAPTER V DISCUSSION	84
5.1 Methods and participants	85
5.1.1 First experiment	85
5.1.2 Second experiment	87
5.2 First experiment: effects of Parkinson’s disease on reach-to-grasp actions	88
5.2.1 Reach-to-grasp planning	88
5.2.2 Transport and grasp kinematics	89
5.2.3 Transport-grasp coordination	90
5.3 Second experiment: Effects of AO on motor learning of RTG actions (both trained- and untrained- task)	91
5.4 Second experiment: Underlying mechanisms of AO on motor learning of RTG actions	93
5.5 Clinical implication	94
5.6 Limitations in the study	96
5.7 Further studies	96
CHAPTER VI CONCLUSION	98
REFERENCE	101
APPENDICES	
Appendix A	120
Appendix B	124
Appendix C	125
Appendix D	130
Appendix E	132
Appendix F	135
Appendix G	136

CONTENTS (cont.)

Appendix H	141
Appendix I	149
Appendix J	152
Appendix K	154
Appendix L	168
Appendix M	174
Appendix N	176
Appendix O	184
Appendix P	192
Appendix Q	195
Appendix R	210
BIOGRAPHY	213

LIST OF TABLES

Table	Page
2.1 The activity of single neurons for coding important parameter during movement	18
2.2 The activation of brain area during control and learning motor skill	18
4.1 Comparison of age, MMSE scores and anxiety and depression level on HADS in first experiment	52
4.2 Comparison of age, disease duration, arm impairment on UPDRS, MMSE scores and anxiety and depression level on HADS in second experiment	53
4.3 Reach-to-grasp variables from control and PD groups; mean (SD)	57
4.4 The main effects of time and group, and interaction (time \times group) in each variable	77
4.5 The mean and standard value in each variable of trained-task at pretest, posttest and retention	78
4.6 The mean and standard value in each variable of untrained-task at pretest, posttest and retention	79
4.7 The number and percentage of patients who chose level of agreement in questionnaire regarding the advantage of training	82
M.1 Means and standard deviations of each variable at first and second measurements, and intraclass correlation coefficients for analyses the reliability between first and second measurements of each variable	175
N.1 Comparison of age, MMSE scores and anxiety and depression level on HADS in pilot of first experiment	177
N.2 Reach-to-grasp variables from control and PD groups; mean (SD)	178
N.3 Sample size for each variable in pilot study of first experiment	179
N.4 Comparison of age, disease duration, UPDRS score, MMSE scores and anxiety and depression level on HADS in pilot of second experiment	180

LIST OF TABLES (cont.)

Table	Page
N.5 The mean and standard value in each variable of untrained-task at pretest, posttest and retention ; mean (SD)	180
N.6 Sample size for each variable in pilot of second experiment	183
O.1 Raw data of characteristics of participants in pilot study of first experiment	184
O.2 Raw data of each variable in pilot study of first experiment	185
O.3 Raw data of characteristics of participants in pilot study of second experiment	186
O.4 Raw data of Reaction time, Movement time, and Maximum velocity in pilot study of second experiment	187
O.5 Raw data of Absolute time to maximum velocity, Relative time to maximum velocity, and Absolute deceleration time in pilot study of second experiment	188
O.6 Raw data of Relative deceleration time, maximum aperture and absolute time to maximum aperture in pilot study of second experiment	189
O.7 Raw data of Relative time to maximum aperture, Absolute aperture closure time and Relative aperture closure time in pilot study of second experiment	190
O.8 Raw data of Aperture closure distance, Highest cross correlation coefficient and Associated time lag in pilot study of second experiment	191
P.1 Raw data of characteristics of participants in first experiment	192
P.2 Raw data of each variable of first experiment	193
Q.1 Raw data of characteristics of participants in second experiment	195
Q.2 Raw data of Reaction time, Movement time, and Maximum velocity in second experiment	196
Q.3 Raw data of Absolute time to maximum velocity, Relative time to maximum velocity, and Absolute deceleration time in second experiment	197
Q.4 Raw data of Relative deceleration time, maximum aperture and absolute time to maximum aperture in second experiment	199

LIST OF TABLES (cont.)

Table	Page
Q.5 Raw data of Relative time to maximum aperture, Absolute aperture closure time and Relative aperture closure time in second experiment	200
Q.6 Raw data of Aperture closure distance, Highest cross correlation coefficient and Associated time lag in second experiment	201
Q.7 Raw time (seconds) of lifting can, lifting pencil and lifting paper clip in second experiment	203
Q.8 Raw time (seconds) of stacking checkers, flipping cards and turning key in second experiment	204
Q.9 Raw total time (seconds) of 6 items of Wolf motor function test in second experiment	205
Q.10 Raw answering in each question in questionnaire in second experiment	206
Q.11 Type and amount of medication that participants in both experiment normally take	208

LIST OF FIGURES

Figure	Page
2.1 The visuomotor transformations required for reaching and grasping in normal situation	20
2.2 The visuomotor transformations required for reaching and grasping under barrier condition	20
2.3 Fagg-Arbib-Rizzolatti-Sakata or FARS model in monkey's brain	30
3.1 Electromagnetic tracking motion system (figure from manual guidelines of MotionMonitor, Innsport, Inc.)	41
3.2 Characteristics of RTG under barrier avoidance task	43
3.3 All variables of RTG planning, kinematics and coordination	46
4.1 The recruitment processes for first and second experiment	51
4.2 Tangential transport velocity profile in PD group and non-disabled controls	55
4.3 Grasp aperture size plots in PD and non-disabled controls groups	56
4.4 Transport-grasp coordination expressed by cross correlation coefficient as a function of time lag in PD and non-disabled controls groups	56
4.5 Average total time and standard error (SE) of dexterity domain in Wolf motor function test (WMFT) at each testing time in AO, P and C group	59
4.6 Average time for lifting can and standard error (SE) of Wolf motor function test (WMFT) at each testing time in AO, P and C group	60
4.7 Average time for lifting pencil and standard error (SE) of Wolf motor function test (WMFT) at each testing time in AO, P and C group	61
4.8 Average time for lifting paper clip and standard error (SE) of Wolf motor function test (WMFT) at each testing time in AO, P and C group	61
4.9 Average time for stacking checkers and standard error (SE) of Wolf motor function test (WMFT) at each testing time in AO, P and C group	62
4.10 Average time for flipping cards and standard error (SE) of Wolf motor function test (WMFT) at each testing time in AO, P and C group	63

LIST OF FIGURES (cont.)

Figure	Page
4.11 Average time for turning key and standard error (SE) of Wolf motor function test (WMFT) at each testing time in AO, P and C group	64
4.12 Average reaction time and standard error (SE) at each testing time in AO, P and C group	65
4.13 Average movement time and standard error (SE) at each testing time in AO, P and C group	66
4.14 Average maximum velocity and standard error (SE) at each testing time in AO, P and C group	68
4.15 Average absolute time to maximum velocity and standard error (SE) at each testing time in AO, P and C group	69
4.16 Average relative time to maximum velocity and standard error (SE) at each testing time in AO, P and C group	69
4.17 Average absolute deceleration time and standard error (SE) at each testing time in AO, P and C group	70
4.18 Average relative deceleration time and standard error (SE) at each testing time in AO, P and C group	70
4.19 Average maximum aperture and standard error (SE) at each testing time in AO, P and C group	72
4.20 Average absolute time to maximum aperture and standard error (SE) at each testing time in AO, P and C group	73
4.21 Average relative time to maximum aperture and standard error (SE) at each testing time in AO, P and C group	73
4.22 Average absolute aperture closure time and standard error (SE) at each testing time in AO, P and C group	74
4.23 Average relative aperture closure time and standard error (SE) at each testing time in AO, P and C group	74

LIST OF FIGURES (cont.)

Figure	Page
4.24 Average aperture closure distance and standard error (SE) at each testing time in AO, P and C group	75
4.25 Average maximal correlation coefficient and standard error (SE) at each testing time in AO, P and C group	76
4.26 Average associated time lag and standard error (SE) at each testing time in AO, P and C group	76

LIST OF ABBREVIATIONS

RTG	=	reach-to-grasp
PD	=	Parkinson's disease
RT	=	Reaction time
MT	=	Movement time
V_{\max}	=	Maximum velocity
TV_{\max}	=	Time to maximum velocity
DT	=	Deceleration time
A_{\max}	=	Maximum aperture
TA_{\max}	=	Time to maximum aperture
ACD	=	Aperture closure distance
ACT	=	Aperture closure time
r_{\max}	=	Maximal correlation coefficient
T_{\max}	=	Associated time lag
AO	=	Action observation
P	=	Placebo
C	=	Control
MMSE	=	Mini Mental State Examination
UPDRS	=	Unified Parkinson's disease rating scale
HADS	=	Hospital Anxiety and Depression Scale
WMFT	=	Wolf Motor Function test
RM ANCOVA	=	repeated-measure analysis of covariance
