

ACKNOWLEDGEMENTS

This work has been greatly encouraged by my supervisors Assoc. Prof. Dr. Surasak Suranuntchai, Asst. Prof. Dr.-Ing. Vitoon Uthaisangsuk and Dr. Suwat Jirathearanat. I would like to express my sincere gratitude and deepest appreciation to them. They provided very constructive advice and suggestions which enriched my research experience. Their invaluable guidance and mentorship, and helpful comments and criticism have been always enlightening and inspiring. I would like to thank Assoc. Prof. Dilok Sriprapai and Assoc. Prof. Charn Thanadngarn for examining this dissertation and giving valuable comments.

I would like to express my appreciation to Professor. Dr. Frédéric Barlat (Materials Mechanic Laboratory, Graduate Institute of Ferrous Technology, Pohang University of Science and Technology) for his support regarding testing apparatuses and valuable discussions when I was in his laboratory as Doctoral researcher. Additionally, I also deeply appreciate to him offering the calculated constitutive hardening and yield models, M-K model. I gratefully acknowledge to POSCO for the supplied materials, especially Dr. Dong Jin Kim for providing POSCO Advanced High Strength Steel materials and to Professor Dr. Jeong Whan Yoon (Swinburne University of Technology) for providing the Yld2000-2d UMAT program.

This doctoral research work will not be successfully by without the financial support from the “National Research council of Thailand” and the “National Research University Project”, the office of the Higher Education Commission for the funding supports. Finally, I would like to grateful thanks to Royal Thai Government Scholarship for Science and Technology to study in Doctor of Engineering in Metal Forming Technology and also scholarship for Doctoral Research Internship (one year) at Materials Mechanics Laboratory, GIFT, POSTECH, Korea. Under the supervision of Prof.Frédéric Barlat.

I gratefully acknowledge the THAI SUMMIT AUTOPARTS INDUSTRY CO.,LTD.for material support and industrial pressed part, especially, Mr.Yongyudth Thanauyaporn for providing all support.

I really appreciate all of my colleagues in Materials Mechanics Laboratory for their supports and help on my work in MML and my life in Korea. I wish to extend my thanks to my friends in Metal Forming and Material Modeling for their valuable helps and supports during this research work.

I wish to express my sincere and deepest gratitude to my mother and father for their loves, patience and cooperation throughout their lives.My heart will be forever indebted to my parents for all the supports. Finally, this research work is dedicated to my beloved mother and father.
