

## LIST OF TABLES

TABLE	PAGE
3.1 Uniaxial tension properties for the DP780 steel (engineering value)	44
3.2 Uniaxial tension properties for the TRIP780 steel (engineering value)	45
3.3 Uniaxial tension properties for the JAC780Y (engineering value)	45
3.4 Normalized flow stresses and $r$ -values for the DP780 steel	45
3.5 Normalized flow stresses and $r$ -values for the TRIP780 steel	45
3.6 Normalized flow stresses and $r$ -values for the JAC780Y steel	45
3.7 Determined anisotropic coefficients of the Hill'48 criterion	55
3.8 Experimentally determined yield stresses and yield stress ratios according to Voce type hardening law at a plastic strain of 0.01	55
3.9 Calculated anisotropic coefficients of the Yld2000-2d model with $M = 6$ and Voce hardening law	55
3.10 Calculated anisotropic coefficients of the Yld2000-2d model with $M = 7$ and Voce hardening law	55
3.11 Experimentally determined yield stresses and yield stress ratios according to Swift type hardening law at a plastic strain of 0.01	55
3.12 Calculated anisotropic coefficients of the Yld2000-2d model with $M = 6$ and Swift hardening law	55
3.13 Calculated anisotropic coefficients of the Yld2000-2d model with $M = 7$ and Swift hardening law	56
3.14 Hill's 48 anisotropic coefficients for the DP780 and TRIP780 steels	56
3.15 Anisotropic coefficients of the Yld2000-2d model for the DP780 steel	56
3.16 Anisotropic coefficients of the Yld2000-2d model for the TRIP780 steel	56
3.17 Materials constants of the Swift hardening model	56
3.18 Materials constants of the modified Voce hardening model	56
3.19 Hill's 48 anisotropic coefficients for the JAC780 steel	57
3.20 Anisotropic coefficients of the Yld2000-2d model for the JAC780Y	57
3.21 Materials constants of the Swift hardening model	57
