#### Abstract

This research work contains biological activities of Cordyline fruticosa Back leaves and synthesis of xanthenes derivatives using hexabromoacetone. Methanol (MeOH), ethyl acetate (EtOAc) and hexane extracts from C. fruticosa Back leaves were measured for antioxidant and antibacterial activities. All extracts showed potent antioxidant activity on DPPH radical scavenging (IC<sub>50</sub> 0.94-8.19 mg/mL) and FRAP assay (9.58-31.36 mmol  $Fe^{2+}$  eq/g) with the strongest activities of EtOAc extract. All extracts also presented the potent  $\text{Fe}^{2+}$  chelating activity (IC<sub>50</sub> 0.91-3.89 mg/mL) with the highest activity of hexane extract. In the Folin-Ciocalteau assay, MeOH extract showed the highest total phenolic content  $(41.91 \pm 1.32 \text{ mg GAE/g})$  but performed low antibacterial activity against Bacillus cereus, Salmonella thypii and Streptococcus sobrinus with a diameter of inhibition zone of 9.1, 8.1 and 8.1 mm, respectively at a concentration of 500 ppm. Furthermore, a novel and efficient method for the synthesis of xanthene derivatives using hexabromoacetone (Br<sub>3</sub>CCOCBr<sub>3</sub>) has been established under solventfree conditions. The reaction of various aromatic aldehydes with  $\beta$ -naphthol, 5,5dimethyl-1,3-cyclohexanedione or 5-methyl-1,3-cyclohexanedione in the presence of 5% mol Br<sub>3</sub>CCOCBr<sub>3</sub> was successfully applied, providing the desired products in excellent yields at short reaction times.

#### ACKNOWLEDGEMENTS

First of all, I would like to give thanks to my Lord, Jesus Christ, who gives me love and strength during my study in Thailand and makes these all possible under his merciful guidance.

Foremost, I would like to express my special appreciation and sincere gratitude to my advisor, Dr. Oraphin Chantarasriwong, for her continuous support of my study, patience, motivation and immense knowledge in all the time of research and thesis writing. I could not have imagined to have a better advisor and mentor like her.

I also gratefully acknowledge my co-advisor, Dr. Choladda Srisuwannaket, for her advice, care and crucial contribution for my work. Also, to the rest of thesis committee, Dr. Withawat Mingvanish, Dr. Nakorn Niamnont and Asst. Prof. Dr. Wanchai Pluempanupat, for their encouragements, brilliant comments and suggestions for this research.

I also want to declare my thankfulness to all staff and faculty member of Faculty of Science, King Mongkut's University of Technology Thonburi, Thailand, for their kindness, learning amenities and research facilities. My sincere thanks also goes to all staff, lecturers and team member at Faculty of Forestry and International Excellent Program, Mulawarman University, Indonesia, who facilitate and mediate this international program. In addition, I would like to thank to Beasiswa Kaltim Cemerlang Scholarship East Kalimantan Provincial Government, Indonesia, for their financial support during my study in Thailand.

Last but not least, I would like to thank to all my Indonesian friends, Thai buddies, colleagues and all people who cannot be mentioned one by one. And, the special thanks are dedicated to my family member, particularly, my lovely father, mother, sister and fiancée, for their supports, prayers, cares and loves. Thank you so much and God bless you all.
