

ACKNOWLEDGEMENTS

Foremost, the author would like to express his gratitude to the supervisors of this project, Assoc. Prof. Dr. Supaporn Therdthienwong and Assoc. Prof. Dr. Apichai Therdthienwong for technical support, valuable guidance and encouragement. The author also appreciates the committees of this project, Assoc. Prof. Dr. Anawat Sungpet and Assist. Prof. Dr. Panchan Sricharoon for the technical suggestions and comments. I would like to extend my thanks to the group of researchers from Fuel cell laboratory, Chemical Engineering, King Mongkut's University of Technology Thonburi, Mr. Sarayut Yongprapat and Ms. Jarupak Thepkaew for technical support. I would like to extend my thanks to Nanotechnology Center of Thailand for research financial support.

Moreover, I would like to express my appreciation to all distinguished faculty members, particularly in Chemical Engineering Practice School (ChEPS), King Mongkut's University of Technology Thonburi, who provided the scholarship, solid engineering foundation through their lectures and excellent simulation. Next I would like to thank my family for the great encouragement that is one of all supports to make this research complete. Lastly, I would also like to thank my friends to encourage me to study at ChEPS, and the great cheer for my defense and my classmate ChEPS13.
