

## ACKNOWLEDGEMENTS

This thesis could have never been possible without the continual help, supervision, support and guidance of many people. It is their inspiration and encouragement which helped me pass through the difficult days.

First, I am deeply appreciation and indebted to my advisor, Associate Professor Mathirut Mungthin, Department of Parasitology, Phramongkutklao College of Medicine, for his excellent opinions, and for the knowledge and experience which he has generously with me throughout my study for the thesis.

Grateful appreciation is extended to my co-advisor, Professor Kesara Na-Bangchang, Director of Graduate Program in Biomedical Sciences, Faculty of Allied Health Sciences, Thammasat University, for her kindness and providing me the opportunity to study this course, and also for her guidance. Assistance Professor Pongchai Harnyuttanakorn, Department of Biology, Faculty of Science, Chulalongkorn University, for support of the parasite isolates and good suggestion for me. Doctor Ruchaneewan Aunpad, Lecturer of Graduate Program in Biomedical Sciences, Faculty of Allied Health Sciences, Thammasat University, for her kindness of the guidance of molecular studies.

I would like to show my appreciation to the following people, namely Associate Professor Saovanee Leelayoova for her everything kindness and also to thank all members of the Department of Parasitology, Phramongkutklao College of Medicine who have providing me all the facilities used for my study.

I would also like to thank the financially supported by the Thailand Research Council and the Defense Research and Development Office, Ministry of Defense, Thailand.

Lastly, words of my deepest gratitude are due to my parents, family and friends for their inspiration spirit and many good times for me. They always heart and soul realize emphasize the importance of education, support and encouragement during my study.
