

LIST OF TABLES

Table	Page
LITERRATURES REVIEW	
1. The time of introduction for clinical use and the first reports of antimalarial drug resistance <i>P. falciparum</i>	12
2. Classification of <i>in vivo</i> antimalarial drug treatment outcomes according to the original WHO protocol for areas with substantial malaria transmission.	14
3. Modified classification (1996)	15
4. Determinants of antimalarial drug resistance	38
MATERIALS AND METHODS	
5. <i>P. falciparum</i> isolates to be used in the study	59
6. Primer sequences used for the detection of polymorphism at position 76, 220, 271, 326, 356, and 371 in <i>pfCRT</i>	70
7. Primers and cycling condition employed to determine the amino acids at various codons in <i>pfCRT</i>	71
8. Sequences of primers used for typing polymorphism at position 86, 184, 1034, 1042 and 1246 in <i>pfmdr1</i>	73
9. K1 and 7G8 <i>pfmdr1</i> genotypes	75
10. Primer sequences	78
RESULTS	
11. Distribution of the level of CQ resistance in parasite isolates	82
12. Distribution of the level of MQ susceptibility in parasite isolates	89
13. Summary of <i>pfert</i> polymorphism profile of parasite isolates	103
14. Summary of <i>pfmdr1</i> polymorphism profile of parasite isolates	110
15. Association between the gene copy numbers of the <i>pfmdr1</i> gene and the <i>in vitro</i> susceptibility	114

LIST OF TABLES (Cont.)

Table	Page
16. Association between the gene copy numbers of the <i>pfmdr1</i> gene and the <i>in vitro</i> susceptibility with codon 86 mutation	115
17. Association between <i>in vitro</i> susceptibility and the gene copy number of the <i>pfmdr1</i> gene at codon 184 mutation	117
18. Association between <i>in vitro</i> susceptibility and the gene copy number of the <i>pfmdr1</i> gene at codon 1034mutation	120
19. Association between <i>in vitro</i> susceptibility and the gene copy number of the <i>pfmdr1</i> gene at codon 1042mutation	123
20. Association between <i>in vitro</i> susceptibility and the gene copy number of the <i>pfmdr1</i> gene at codon 1042mutation	125
21. Association between pattern of <i>pfmdr1</i> gene polymorphism and time period of isolates collection	128
22. The influence of multiple point mutation patterns of <i>pfmdr1</i> gene at codon 86, 184, 1034, 1042 and 1246 on the sensitivity of <i>P.falciparum</i> isolates to CQ, QN, MQ and ARS	129
23. Association of <i>pfmdr1</i> copy number and <i>pfcr1</i> and <i>pfmdr1</i> gene polymorphisms with CQ susceptibility	135
24. Association of <i>pfmdr1</i> copy number and <i>pfcr1</i> and <i>pfmdr1</i> gene polymorphisms with MQ susceptibility	136
