

LIST OF TABLES

TABLES	PAGE
2.1 Sign and symptom of musculoskeletal pain from musculoskeletal system disease and degenerative change.....	10
2.2 Thai mental measurement tools.....	33
3.1 The character of subjects in no pain (NP), acute musculoskeletal pain (AMSP) and chronic musculoskeletal pain (CMSP) groups	50
3.2 The comparison of the mean of the pain intensity score (PI score), disability point (DP) and pain dysfunction score (PD score) between acute musculoskeletal pain (AMSP) and chronic musculoskeletal pain (CMSP) groups.....	51
3.3 The number of samples by center, age and gender for the total 3,000 samples	54
4.1 The percentage of depression screening by risk factors in 194 chronic musculoskeletal pain subjects.....	64
4.2 Coefficient of selected variables in multiple logistic regression of probable depression	67
4.3 Predicted Logistic regression of probable depression and risk factors in 194 CMSP	68
4.4 The percentage of the no pain (NP) and chronic musculoskeletal pain (CMSP) subjects by demographic factors at the beginning of phase 2: follow-up phase	69
4.5 Percent increase of high risk depression (D score \geq of 20) in no pain and CMSP subjects during six months follow-up	71
4.6 The number of occurrences of high risk depression (D score of \geq 20) in the no pain and CMSP groups in the follow up period	71
4.7 General characteristics of 34 CMSP with high risk depression (D score of \geq 20).....	73

4.8	The percentage of the group A and group B subjects by demographic factors at the beginning of period 2	77
4.9	Pain score and D score in group A and B	78
4.10	The change of pain score, D score, and the events entire the treatment periods (from interview) in group A	79
4.11	The change of pain score, D score, and the events entire the treatment periods (from interview) in group B.....	80
