

ACKNOWLEDGEMENTS

Firstly, I would like to thanks to my beloved parents and families for supporting and encouragement while I was studying. I would like to say special thanks to my elder sister who gave the funding support for my studies.

Furthermore, I would like to thanks to my respected advisor, Useanya Perngparn, Ph.D., for her kindly supporting, valuable guidance and thorough discussion throughout the study period. This will be unforgettable memories throughout my whole life.

I am also like to express my thanks to all my advisory committee Assoc. Prof. Sathirakorn Pongpanich, Ph.D. and Assoc. Prof. Sompoch Iamsupasit, Ph.D. for their valuable advices and opinions for my thesis. My great gratitude also goes to Assist. Prof. Apinum Aramratana, MD, Ph.D. for his kindly checking of my questionnaires and valuable comments. Moreover, I would like to thanks to all the staffs from the college of public health sciences for their patience and help during my study period.

I would also like to thank to the Director from Mae Sai Hospital and Mrs. Nutchira Pintha, the public health worker for her help and support during my study period. I am also great appreciation to the staffs and volunteers from Mae Sai Hospital.

I would like to thanks to all Myanmar migrant workers those shared their experiences, kindly contribution with patient and hearty help during my data collection.

Finally, but not the least, I would like to thanks to the Higher Education Research Promotion and National Research University Project of Thailand, Office of the Higher Education Commission with the account number (AS1148A-55) for the funding support for my thesis.
