

ACKNOWLEDGEMENTS

First of all, I would like to express my deepest respect and gratitude to my supervisor Assoc. Prof. Dr. Chainarong Navanukraw, for his encouragement, in valuable suggestions, excellent skilled technical assistance, guiding these experiments from their beginning, corrections, revising the English of the manuscript and help in bringing this thesis to full completion.

The second, special thanks to my graduate committee: Assoc. Prof. Dr. Chalong Wachirapakorn and Assist. Prof. Dr. Parwadee Pakdee, for their advice and guidance partial time for the study. I would like to gratefully thank Prof. Dr. Kanchana Markvichitr and Assoc. Prof. Dr. Suthipong Uriyapongson for guidance partial time for something better of my life. All their technical contributions and I am grateful to the graduate students, employees at the Department of Animal Science, Faculty of Agriculture, Khon Kaen University for their help and patience during the study.

I would like to thank all my friends both near and far as well as classmates who have helped me get through this program. Good luck and best wishes in the future. Also, thanks to my former teachers, for pushing me to the limits and showing me how to love life and live it to the fullest. Finally, the most heartfelt thanks to my parents and my families, I am today. This degree belongs to everybody.

This study was financially supported by National Reserch Council of Thailand (NRCT), and Rajamangala University of Technology Isan, Kalasin campus, Kalasin, Thailand.
