

ACKNOWLEDGEMENTS

The author would like to thank the Joint Graduate School of Energy and Environment (JGSEE) and the National Research University Project of Thailand's Office of the Higher Education Commission (NRU) for the apportion by study in the graduate program at King Mongkut's University of Technology Thonburi (KMUTT) and for financial aid.

The author sincerely appreciates the help, guidance and advice received from her advisor, Professor Dr. Chaiyuth Chinnarasri. Also, thanks extended to her committee members, Professor Dr. Tawatchai Tingsanchali, Associate Professor Dr. Winyu Rattanapitikon, Assistant Professor Dr. Sanit Wongsa and Dr. Somkiat Apipattanavis for their criticisms during the preparation of this thesis.

Special thanks to the staff of Water Resources Engineering and Management Research Center (WAREE), King Mongkut's University of Technology Thonburi and the staff of the Royal Irrigation Department for field measurements.

Finally, the author wishes to express sincere thanks to her family and friends for their love and continuing support to encourage her to complete the degree.
