ABSTRACT

The Study has object to study for physical demonstration for Thai heathen in the past and physical demonstration for Western kitchen. In order to demonstrate for solving a problem which take place in kitchen work, altogether the other best idea for the way for adaptation in present residence. By the way intentioned in case study one the real estate in Bangkok and suburb area which are three beds rooms of single house.

For collection data, which collects information for single model which survey of the actual project which have bun the best gain income both of government part and private individual part, selected by 15 case study are 4 groups.

For behavior study for involving in kitchen of population in case study, have three data are as follow.

1. Food management and cooking behavior for family will be found that the mostly will by fresh food for themselves cooking, is Thai food as the thing to eat with rice. Except for cooking will be found the other behavior etc have food in kitchen which mostly the behavior not any change except for technical and more convention equipment.

2. Modification behavior will follow by physical environment. The Responder has good attitude for Western model kitchen. Responders will more modified individual behavior than physical environment.

3. Solve problem for air-refresh inside kitchen. Mostly will be used to open the door or window in order to air fresh, smell and smoke by cooking.

The study compare the good modified with Thai kitchen old and Western kitchen which consider for approximate for Thai cooking, the way of life and overview of building altogether interior factors which mentioned in air-refresh. Kitchen is related and consistent with natural I.E. weather, food resource but Western kitchen has system planning, furniture and other system to afford for convenience use. The study conclude on the way for design as follow :

Plan for room and working point position, include physical demonstrate mentioned in solving problem for air refreshing inside of room , furniture and interior factor in kitchen will followed on activity using, otherway for planning kitchen.

With the study will be developed for physical environment for kitchen , approximate for Thai behave which will useful for Interior Architecture subject and involving subject.
