ABSTRACT

Nowadays the world of education have been growing by leaps and bounds. Music is one of the knowlage which has been interestion trompe people. Consequently many music schools have opened under obsevation of Education Department which controls the practical curriculum of the music school to give a benefit to learners and inverter.

the inverstigated grouod of this research is a music school which situates inside a commercial building. Having analysed the music school is devided in two part as follow:

1. Service area
2. Education area

Each part is divided into small sections which are used to satisfy the demand of each musical instrument that is contained in the curriculum. Piano is mostly chosen to study electone and guitar in order. Most of the space used on saturpay and Sunday are 90% that is classified by the amount of learners in each room. Concerning of proportion in each room is not enough, the effection of the sound in the room is regarded too, that would be able to help learners to concentrate.

For the appropriate prototype of the Music school should have 288 students and be in the shop house in the condition that has been researched and analized.
