Degree	Master of Science
Programme	Computer Science and Information Technology
Year	1999
Thesis Advisor	Assoc.Prof.Dr.Suphamit Chittayasothorn

ABSTRACT

As software system grow in complexity and size, the task of system analysis becomes increasingly difficult to understand and apply. This research introduces the development of information systems for use in The Veteran Hospital. This system uses an object-oriented approach. The relationship among individual objects, as well as their mutually cooperative relationships, are examined with respect to their real-world applications. The approach presented is simple to understand. As a result, one additional benefit the ability to improve and expand the system to meet changing demands.
