

ACKNOWLEDGEMENTS

I would like to express my deepest gratitude to all parties who have assisted me in completing this dissertation. First and foremost will be my dissertation advisor, Assistant Professor Dr. Wannee Taechoyotin, and co-advisor, Assistant Professor Dr. Somchai Supattarakul. Both have given me great support throughout every stage of my doctoral study, especially in the development and completion of this dissertation. This dissertation would not have been possible without their valuable guidance and suggestions.

Second, I would like to sincerely thank my dissertation committee, namely Assistant Professor Dr. Kanogporn Narktabtee, Dr. Sansakrit Vichitlekarn, Dr. Aim-Orn Jaikengkit, and Associate Professor Dr. Supol Durongwatana, for their invaluable comments and insightful suggestions in helping me improve upon and complete my dissertation.

Third, I would like to sincerely thank Professor Steven Salterio, who kindly provides me with the case instrument for Lipe and Salterio (2000). Without his great help, I would not be able to complete this dissertation and the results of my paper would not be comparable to prior literature that explores common measure bias.

Fourth, I would like to thank all my professors in the JDBA program for equipping me with valuable knowledge. I would like to also thank Professor Dr. Pornchai Chunhachinda and all the JDBA staff from Thammasat University, NIDA, and Chulalongkorn University for support and assistance. I would like to thank all my friends, especially Orapan and Suntaree, for their continuous support and encouragement throughout five years of study in the JDBA program.

Last but not least, I would like thank my parents and my family for their great support, especially my husband. Without his great support, understanding, and patience, I would not have completed my doctoral degree.

Lisa Sawatyanont
