### Abstract

The questionnaire is aimed to find the appropriate cooperation strategies between education institutes and training places for automation technician trainees from Rajamangala Institutes, Technical Colleges under the supervision of Vocational Department and Private Colleges Office. The questionnaires were distributed to 120 executives of training places, 120 automotive technician trainees and 120 instruction supervisors in Bangkok and perimeter. The data were then subjected to statistical analysis to find frequencies, percentage, arithmetic means and standard deviation.

The correspondents believe education. The research also shown that to provide successful training, various factors should be considered, i.e. training location, expenses, procedures, supervision, appraisal and evaluation. With all these factors, the appropriate cooperation between education institutes and training places for automotive technician trainees from Rajamangala Institutes, Technical Colleges under the supervision of Vocational Department and Private Colleges Office on students job training will be established.
