Abstract

The changes of economics, society, politics and also the advanced technology in all kinds of nature studies, especially, the change of the curriculum effect the achievement in instructional activities. The academic internal supervision is one process that can help to have the development in advance against the fore - mentioned changes and can help the educational management more efficient.

This research has a purpose for studying the situations and problems of internal-supervision about the academic in industrial field of technical colleges under the Department of Vocational Education. As the opinions of industrial teachers in six views. They are curriculum and teachings, instructional media, preparing the workshop and laboratory, preparing tools, machines and equipments, in-service training and further education and also instructional evaluation. The samples of using for studying are industrial teachers all over the country which is the amount of 70 colleges. The questionnaires were made by the researcher as the check lists, 360 questionnaires were sent out for selecting the samples and 320 complete questionnaires were returned. The percentage of them is 89.13, then bring back to analyze the information by using the arithmetic mean (\bar{X}), the standard deviation (S.D.) and the percentage value.

The result of this research was found that the real situation of the internal-supervision in six views means that there was some supervision was fair and no much problem for learning and teaching, except the problems of teachers for practical teaching in six views had some problems and tended to damage the learning and teaching efficiency, but not so much.
