Abstract

The objective of this study was to investigate the competence of technologists in the field of industrial ceramic suitable for industrial needs in Thailand (1990-1997).

A sample consisted of 165 subjects: 36 experts 39 administrators 47 owner of factories, and 43 industrialists. The questionnaires constructed by the researcher were used. The treatment of data involved the use of mean scores, standard deviation, percentage and median.

The result of this study indicated that the desired competence of technologist in the fields of Industrial Ceramic includes: knowledge both in theories and in practical work, personality, human relationship and professional attitude. The students as a whole could correctly accomplish the test with high percentage in each skill.
