### Abstract

The aim of this work was to investigate the competence of technologists in the fields of Prime Mover which would be suitable for industrial needs in Thailand in the year 1990-1997.

A Sample consisted of 221 subjects : 24 technical experts, 43 owners of factories, 76 Managements, and 78 supervisors. The questionnaires constructed by the researcher were used. The treatment of data involved the use of mean scores, standard deviation and Percentage.

The result of this study indicated that it was necessary for the technologists' desired competence in the field of Prime Mover to posses knowledge of theories and practical work; to have good personality, professional attitude as well as human relationship. The participants could correctly respond the questionnaires distributed by the researcher with high percentage in every skill.
