

Thesis Title	Developing Instruction Package on the Topic of Electroplating for Metal Finishing Course of Diploma Program for Metal Technology, Institute of Technology and Vocational Education, 1985.
Name	Mr. Sornsak Lattikul
Degree	Master of Science in Technical Education
Major field	Mechanics
Department	Teacher Training in Mechanical Technology
Thesis Advisors	Associate Professor Dr. Chana Kasipar Mr. Somyot Jedjaroenrak
Academic year	1988

#### ABSTRACT

The purpose of this research was to develop instructional package on the topic of Electroplating for Metal Finishing course of Diploma Program for Metal Technology offered by the Institute of Technology and Vocational Education and also to find out the efficiency of the developed package based on the established standard of 80/80.

Four units of the instructional package were used for this experiment. Thirty students from a Technician Diploma class of the Metal Technology division of Institute of Technology and Vocational Education North Bangkok campus were used as the sample group for the experiment. The experiment was conducted during the first semester of 1985 session. After studying by using instructional package, they were immediately tested, both in theory and practice. Data were then gathered and analyzed to find out the results of the instructional package.

The findings of this research showed that the efficiency ratio of the instructional package for the theoretical part was 88.5/83.13, and for practical part was 89.21/92.47. Both were higher than the established standard.
