Date of Graduation	5 June B.E. 2532 (1989)

ABSTRACT

The objective of this study was to study the designing of environmental education training programme entitled "Forest Resources Conservation" for sub-district and village headmen. Instruments in this study were : (1) The questionnaire for surveying the background of the trainees, (2) The training programme on environmental education entitled "Forest Resources Conservation" for sub-district and village headmen , (3) Evaluation forms for observers, and (4) Evaluation forms for trainees.

The subjects in this study were 79 sub-district and village headmen at Nonggi District in Burirum Province. The study involved 1) pre-planning and surveying primary data of sub-district and village headmen, 2) designing training programme, 3) assessing

the training design and evaluating of training effectiveness and,
4) improvement. There were 6 components in training programme :
objectives, contents, activity, media, resources, and evaluation.

The following are among the conclusions drawn from the
study : (1) Need assessment should be involved in the training
programmes, (2) The training programmes should composed six
components : objectives, contents, activity, media, resources,
and evaluation, (3) The effectiveness of the training programmes
should be obtained from the evaluation by the experts, participants
and observers and assessing the training programmes with the target
group.
