#### ABSTRACT

The purpose of this research was to develop an instructional teaching package on traffic course for third class police cadet students about "Air Pollution". The constructed instructional teaching package comprised of two sets of multi-media teaching aids, self learning package and video tape. The sample of this study was sixty students of third class police cadet, at Police Cadet Academy, Tambol Samphran, Amphoe Samphran, Changwat Nakornpathom. They were divided equally into experimental group and control group by simple random method. The results were as follows:

1. The instruction package had the efficiency above the standard criterion 90/90.

2. After learned by the instruction package the students gained more achievement statistically at the level of significant .05.

3. The students in experimental group had better achievement than control group statistically at level of significant .05.

This result concluded that the constructed instructional teaching package had adequate efficiency, and should apply to another police students.
