

ACKNOWLEDGEMENTS

This study could not have been completed without the support of many people whom I should like to thank. Foremost I would like to express my gratitude to the advisor of the project, Dr. Ing. Panit Kitsubun, for his technical expertise and valuable guidance. In addition I would like to express my gratitude to Assoc. Prof. Weera loha and Asst. Prof. Jindarat Pimsamarn, the project committee, for their keen attention to this research project and their valuable ideas to improve the study. I would like to thank Dr. Nathakorn Kraikul, Dr. Phatharaporn Sridatprasat and Dr. Wikanda winyasuk, senior researchers at PTT Global Chemical Public Company Limited, who gave me the valuable guidance about the lignocellulosic material pretreatment and also their support in my experiment. Moreover, I appreciate the help offered by Dr. Nilubon Jong-anurukul and K. Disayapong Jainuknan for supporting my study and K. Prapawee for a valuable suggestion when I faced difficulties during the course of the experiment.

Additionally I would like to express my thanks the Chemical Engineering Practice School (ChEPS) which gave me an opportunity to study chemical engineering knowledge; PTT Global Chemical Public Company Limited for funding during my study of the ChEPS program and for giving me a chance to study the latest developments in this field of research and King Mongkut's University of Technology Thonburi (KMUTT) which I both admire and respect. Next, I would like to thank Mrs. Chadaporn dummunee, who helped the author with communication and key information required to finish my master's degree. Finally, I would like to express my appreciation to my family for their encouragement and my dear friends at ChEPS for their help and kindness.
