#### ABSTRACT

The objectives of this research were to investigate the pattern of decision making factors related to decision making about optimum population of the police cadets.

The variables employed in this study were number of children in a family, family size, occupation of father and mother, levels of education of father and mother, domicile, knowledge about population situations, attitudes toward population situations, and income of the family. The population used in the research consisted of 300 persons in the police cadets. The research instrument was self-response questionnaires which was developed by the researcher. Data collection was done in two days. The data were analyzed by computer using SPSS package. Statistical methods used were percentage and Chi-Square test.

The research results revealed that :

1. The decision making about optimum population of the police cadets considered appropriateness.
2. Number of children in family occupation of father, income of the family, family size, knowledge about population situations, and attitudes toward population situations Presented relationship with decision making Mother's occupation education of father and mother, and domicile were not found relationship with decision making.
