

Reservation and analyzed by percentage and mode.

The results were as follow:-

1. Most Sub-district Council Committee members had the medium level of awareness on Mangrove Forest Resource Conservation in Samutsakhon. The mean was 3.29 and the range was 2.50-3.49.

2. Most of the Sub-district Council Committee members had never participated on activities regarding Mangrove Forest Resource Conservation. The participated activities on Mangrove Forest Resource Conservation were at a low rate. About 89.85 87.68 68.85 and 90.58 percent of the committee reported never participated in planning, implementing, conserving and follow up activities of conservation respectively. Only 14.13 percent of the committee reported having participated at 1-3 times per year, but 73.55 percent of those reported that they should had a high level of participation in conserving activities.

Most of the Sub-district Council Committee members had never participated in the various type of conseving with regard to participation according to the 10 types of conserving activities. It was found that among those who participated in conserving activities reported that they participated only 1-3 times per year all 10 types conserving activities.

3. Problems, obstacles and suggestions of Sub-district council Committiee were not knowing the proper aerea of Mangrove Forest, officers ignoring, a lack of knowledge on Mangrove Forest Resource Conserving, a lack of budget and the corrosion of the shore. The result of the research found that Sub-district Council Committee who close to Mangrove Forest Resource knew the problems well, but they didn't solve them. So Samutsakhon Province should review the problems and solve them urgently.
