ABSTRACT

The purposes of this research were to develop and experiment a set of sound-slides on Environmental Development and Conservation in teaching Science program for Matayomsuksa 1 students. The research methodology was divided into two steps, to develop and try out the sound-slides at Rachineeburana School, Nakhonpathom. Thirty students were controlled group which was conducted by traditional method. The experimental group of ninety students was divided into 3 groups. The first group was taught by sound-slide. The second group was conducted by explanation and sound-slide. The third group was taught by explanation sound-slide and discussion. The findings were as follows:

1. The students who were conducted by using sound slide obtained more knowledge and attitude.
