

Thesis Title Indexs and Factors Influencing the Evaluation
 of Results in Clinical Chemistry Laboratories
 by External Quality Control.

Name Orathai Thanesakoul

Degree Master of Science(Biostatistics)

Thesis Supervisory Comittee:

 Assistant Professor

 Dr.Thavatchai Vorapongsathorn

 Raviwan Rojanavipart

 Associate Professor

 Taweessook Kanluan

 Amarin Prijavudhi

Date of Graduation 3 June 1988

ABSTRACT

In the evaluation of five important factors influencing internal quality control of six biochemical substances in 139 clinical chemistry laboratories, three major factors, i.e., types and services in health places, strategy of internal quality control, techniques and methods of biochemical sample analysis, relatively show the significant results ($p < 0.05$). The correlation among the three indexs (VIS, SDI, Q) in the study indicated that VIS and SDI have correlation higher than that between VIS and Q or SDI and Q indexs.
