ABSTRACT

The purpose of this research were to study the opinions of the primary school administrators towards work practices of the district primary education office in in Khon Kaen province, including work operation and problem of four main tasks : general administration, personnel, finance and material and educational supervision. Furthermore the suggestions for improving and developing the practices were also studied.

The sampling subjects included 263 primary school administrators of the district primary education office in Khon Kaen province. The data were collected by the developed questionnaire which examined by the experts. The reliability of the questionnaire was 0.91. The earned data were analyzed to acquire percentage, arithmetic means, and standard deviation and ranking by way of the SPSS/PC⁺ computer program. to acquire percentage, arithmetic means (X) stand deviation (S.D.) and ranking.

The Results :

1) The primary school administrators perceived that the district primary education performed their work at "above average" in all four tasks : general administration, personnel, finance and material and educational supervision.

2) The primary school administrators perceived that the district primary education performed their work at "liittle" problems in three stated tasks : general administration, personnel, finance and material, except for educational supervision performed their work at "above average" problem.

3) The following suggestions by the primary education for improving and developing work of the office were:

For the first, the service should be well done temperment.

For the second, the service information report should be done systematic rapidly and time saving.

For the third, the personnel should be acted for the competent authorities and decreased unnecessary process.
