

Thesis Title	Power of linear movement in the sculpture
Name	Mr. Udom Chimpakdee
Concentration	Sculpture
Department	Sculpture
Academic Year	1998

ABSTRACT

Inevitably human beings must encounter birth, age, illness and death: the cycle of life which commonly occurs to everyone, and forces them to ponder and find various solutions. However, nobody conquers it. A silent power, death, has time and powerful change called uncertainty. All things are unstable. This condition motivates power and despair, and brings several questions concerning life, society, culture, belief, tradition, and convention which relate to way of living of people.

To express the relation between the cycle of life and what cause a change, human tries hard to resist and determine their role by high-tech-nology. Eventually, no one can escape from this cycle. My creative expression to be a piece of sculpture presents concept and imagination about the real condition which is ruled by natural law.
