

Thesis Title	Feminality Behavior
Name	Miss Morakot Ketklao
Concentration	Painting
Department	Painting
Academic Year	1997

ABSTRACT

My works focus on human behavior which changing relatively according to time and space. Today new technology played a major role which effect our nature. It creates an unclear definition of things. I am interested in woman behavior. I studied from my self, friends, and family as well as my daily life and found out that woman and beauty goes together. Woman body is functioned like universe, which mean a space that creates tremendous amount of demeanors. In this context, beauty is one of the important issue for contemporary women. There are two kinds of beauty in Thai society in an abstract form as a mind, and a concrete form as a body. The notion of beauty is changed according to time and social value.
