Date of Graduation 30 December B.E.2537 (1994)

ABSTRACT

The objectives of this research were to study the types and degree of technical students' deviant behavior, to study their response to the criminal news on Thai daily newspapers and to study the reaction of their mood and opinion, their relation after the information, their response of mood and opinion to the news, their deviant behavior as well as to study their social back ground and its circumstances and tendency of receiving the news and deviant behavior 340 sampling records of technical students from 6 schools who had made their mistakes collected by questionnaire forms filled by themselves, later analised with SPSS PC computer program and Chi- square statistic.

Finding of this analysis was that sampling students have deviant behavior, 62.4% alcohol drinking, 51.8% fighting, 48.5% smoking. The criminal news that those students like to read, often

follow, often read and pay much attention are killing or injuriousness news. Considering to their positive response of mood and opinion to the criminal news found that they had read every criminal news. They thought the useful news was the news of killing or injuriousness, narcotic drugs, the interesting news was the killing or injuriousness, the warning news was killing or injuriousness, snatching and robbery, raping and narcotic drugs. The negative response which they thought they should leave away was the news of snatching and robbery, narcotic drugs, they thought those who'd done are foolish and might be dead, they don't do it.

Considering the relation between criminal news receiving and deviant behavior found that every criminal news has not related to the deviant behavior while the relation between criminal news receiving and response of mood and opinion to the crime found that only some kinds of criminal news related to the response of mood and opinion to the news. The relation between the response and deviant behavior found that raping related to their deviant behavior that caused inhaling and causing gangs for disturbance. Only the responses of snatching and robbery, narcotic drugs that related to their deviant behavior that caused snatching and robbery.

The study of relation of social background and circumstances and criminal news receiving found that only sexual background related to criminal news receiving. The social circumstances such as the parents' marriage status, relationship, caring (leaving, very strict or democracy) and close friends' deviant behavior found that each variation was related to the criminal news collection but only some types of it.

Studying of the relation between social background and

circumstances with technical students' deviant behavior found that each variation of background ; sex, age, education, family income, close friend of the oppsite sex, record of mistake and health of family are related to some characteristic of deviant behavior while only one variation of circumstances was parents' relationship that unrelated to deviant behavior. The parents' marriage status, 3 types of caring related to some types of deviant behavior. The close friends' deviant behavior related to many samplings of technical students' deviant behavior.
