ABSTRACT

The objectives of this research were to find out the knowledges and opinions concerning of 169 tambon health workers on population data system for public health development planning, in Nakhonnayok Province year 1993. The questionnaires were administered to all of the 169, all of the questionnaires were reliable. General informations data were analized by percentage and means, as knowledge and opinions concerning were analized by percentage, means, standard diviation . This findings are as follows :

In accordance with this research, we found that tambon health workers having knowledge of population data system for public health development planning, in high level (25.011), and having opinions concerning on that positively. When considering about knowledge insuch as, (1) Importance and role of population data (2) population data system for public health development planning (3) usage popula-

tion data in policy and planning (4) type of population data for development planning (5) usage population data for making indicator, and (6) essence were making indicator and utility. It was found that, 72.94 percentages have knowledge and 50 percentages have opinions concerning to concede population data system for public health development planning in such as, (1) covering information form (2) difficulty in recorder (3) repeatedly of information form (4) utilizing of various data, and (5) administrative of population data system.

The researcher recommends that, (1) Because majority having a good knowledge of population data and useful purpose over to public health development. Therefore, especial training the knowledge of technical-know-how and analysis data about health information should be used, or technical on public health is staff to take responsibilities in directly. (2) The measure to the responsibility of tambon health workers have been to participation setting in information form and timing. (3) Data referral toward statistical of population and health information by District and Province level every mouth. (4) Increase coordinate activities between the health centre unit and the ministry of the interior toward population data. And (5) Giving knowledge to population toward importance of population data.
