ABSTRACT

The purposes of this research were to study the management of environmental education activities for primary school teachers and to study the problems of the teachers. The sample population by simple random assignment were 106 teachers. Data were collected by using questionnaires. Statistical techniques included percentage and mode were employed for analysis. The findings were as follows :-
of the teachers.

1. The most popular methodology in teaching environmental education was discussion. The second one was lecture.

2. Most teachers taught their students every day repeatedly about how to get rid of rubbish, cleanliness and kept delightful shade of trees and to use resources and energy efficiently.

3. The most popular instructional aids was supplementary readings. The second one was using pictures.

4. The problems in teaching environmental education were :
having over content, there was no implementation by students,
and not having enough teaching materials.

Recommendation for future studies were as follows :-

1. To study about readiness of primary school teachers.

2. To study factors affecting management of environmental education activities.
