

Abst act

Malaria in Chumpae Malarial Clinic was found 175 cases out of 2,165, *Plasmodium falciparum* 61 cases (2.8 %), *P.vivax* 112 cases (5.2 %) and mixed infection 2 cases (0.1 %). Highest prevalence of infection of *Plasmodium falciparum* was in age-group of 11-20 years, and *P.vivax* was in age-groups of 11-20 and 21-30 years. Peaks of the prevalence of infection were possibly related to rain-fall in July and November.
