#### ABSTRACT

The Government realized that tambon councils were the fundamental key organization in development administration. Tambon councils were assigned for implementation of rural development. However, the increasing of their roles and experiences in development administration. They were encountered various problems that obstructed the strengthening capabilities and affected the development administration. If the government can solve this problems. It will indicate the accompletemet of government in rural development administration.

This research aims to study the capabilities in development administration and find out the compositions influencing the development administration capabilities of tambon councils including the ways to improve and develop these capabilities.

The population of the study were 507 members of 24 tambon councils in 12 Districts and Provinces, Northeast. The data collection was done by interview and data procession was conducted through the computer SPSS program. Stepwise Multiple Regression was employed for testing the hypothesis.

The results of the study had been found as follows :

1. The very high capabilities in development administration of tambon councils are the problems identification, money management, project implementation and follow-up. The very low capabilities are the project planning, evaluation, and maintenance.

2. The tambon councils struture has very high influencing the development administration capabilities of tambon councils. This finding has relationship with the hypothesis.

3. The management technology has very low influencing the development administration capabilities of tambon councils. This does not relate to the hypothesis.

4. The nambers of the committee has very high influencing the developemnt administration capabilities of tambon councils. This responds the hypothesis.

5. The policy and the implementation of the government agencies has very high influencing the development administration capabilities of tambon

councils. This finding has relationship with the hypothesis.

In addition, the model, functions, ability and knowledge, member quality and size, period of position, decentralization of authority, administrative participation and the status of tambons also have highly influencing and responds the hypothesis. But the workload, budget, materials and equipment including the official regulations have very low influencing and have no relationship with the hypothesis.

The possible recommendations are proposed as follows :

1. The government would have to improve and develop the capabilities of tambon councils in regard to project maintenance, evaluation and planning, respectively.

2. The government would have to improve and develop respectively. First, the policy and implementation of decentralization, administrative participation and the status of tambon councils. Secondly, the members of the committee in regard to the position period, ability, and knowledge, member quality and size, Finally, tambon councils structure in regard to the model of tambon councils and the functions of members.
