Relationship between the various concentrations of "saline" on the hatchability and development of *Artemia*

Abstrach

This study showed that 20 ppt of saline from sea salt and 30 ppt of saline from soil salt were the best saline for the hatchability of *Artemia* eggs and they also hatched in 40 ppt and 50 ppt saline.

it was also found that *Artemia* could develop in the various concentrations of saline such as 20 ppt, 30 ppt, 40 pp and 50 ppt.
