ABSTRACT

The purpose of this research was to develop a training curriculum for farmers on plant pest control. The process of this research had three stages :- 1) gathering the farmers' background information 2) curriculum formulation 3) training and development. The samples of this study were the farmers who lived and worked in Amphoe Puttamonthon, Changwat Nakornpathom area. The samples who distributed the background information were 130 households and the samples for training were 30 persons. The tools of this study were the questionnaire and the package of training curriculum which composed of test items, lesson plan, material, and evaluation form.

After two days of training process, the post-test score was significantly increased at 0.05 level and the samples satisfied to the training curriculum and process. The finding revealed that this curriculum was appropriate for training on plant pest control for the farmers.
